AI TOOL OVERVIEW

Name of AI Tool:

Canva Magic Media

Purpose / Domain:

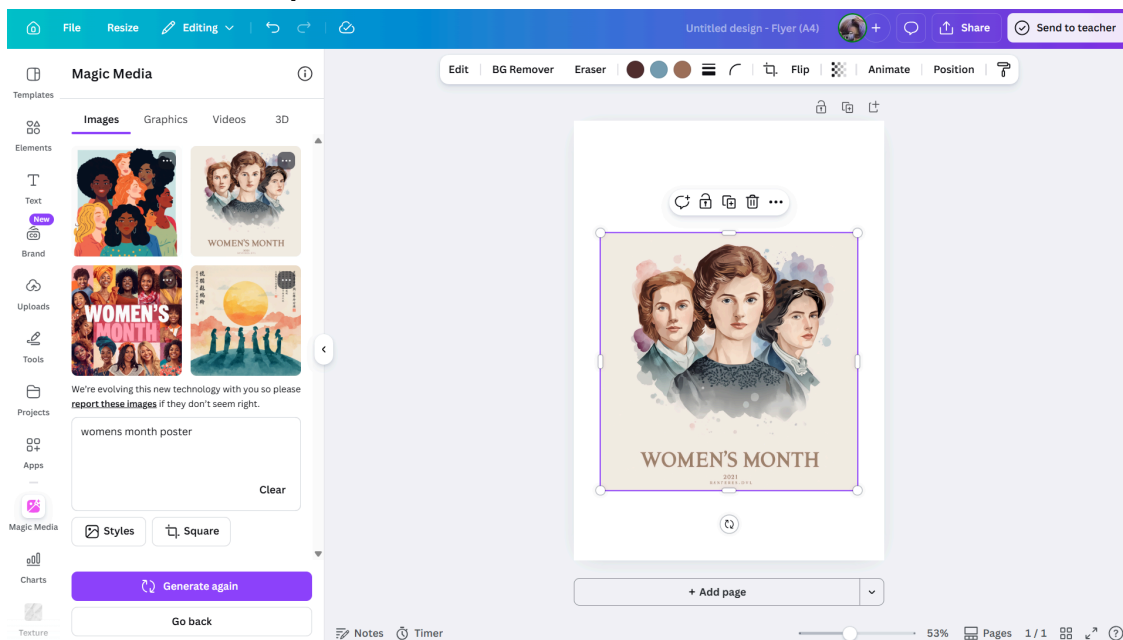

Canva Magic Media is an AI-powered image generation tool used for creating visual designs from text prompts. It belongs to the design and media generation domain and is commonly used for producing posters, social media graphics, advertisements, and other creative visual content. The tool transforms written descriptions into images, allowing users to quickly visualize design ideas without manual illustration or advanced graphic design skills.

Why you chose it:

I chose Canva Magic Media because it is highly relevant to design-based tasks, especially in creating posters and visual compositions. It allows users to observe how different prompt structures affect the quality, style, and meaning of generated images. This makes it ideal for studying prompt engineering, as small changes in wording can significantly influence the output. Additionally, it is user-friendly and widely used in creative industries, making the activity practical and applicable to real-world design work.

PROMPTING PHASE

A. Original Prompt “Women’s Month poster”

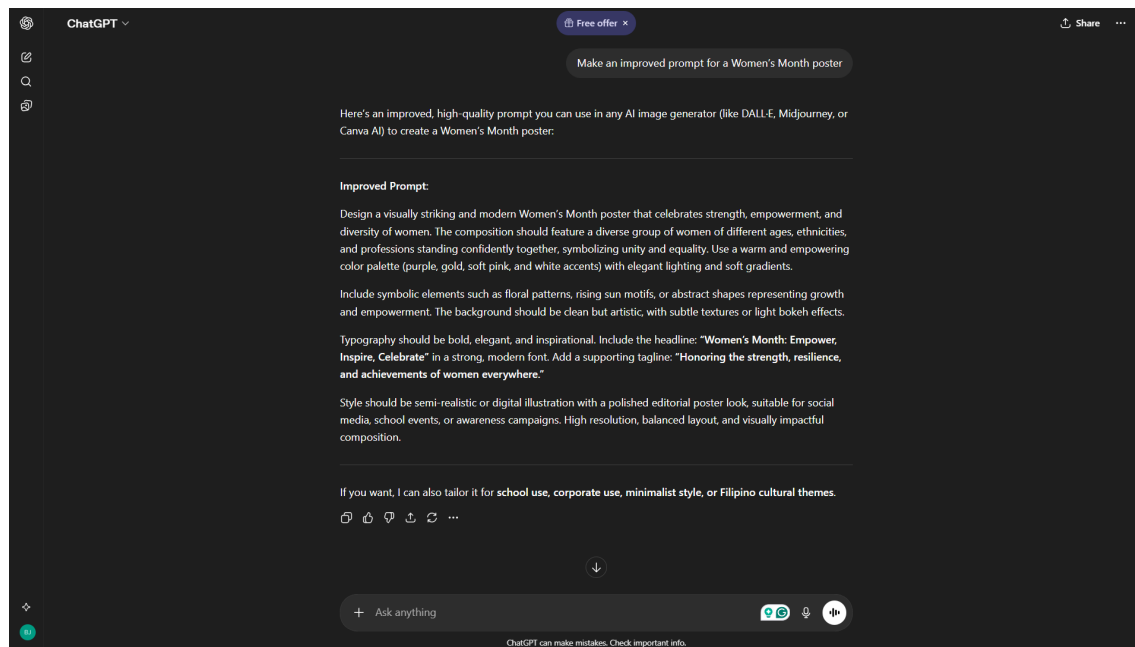

Output Documentation:

The generated image appears generic and lacks a strong design direction. The layout is not clearly structured, and the visual style is inconsistent. While it relates to Women's Month, it does not strongly communicate a specific theme such as empowerment, celebration, or advocacy. The colors and composition appear random, and the overall output does not resemble a professional campaign poster.

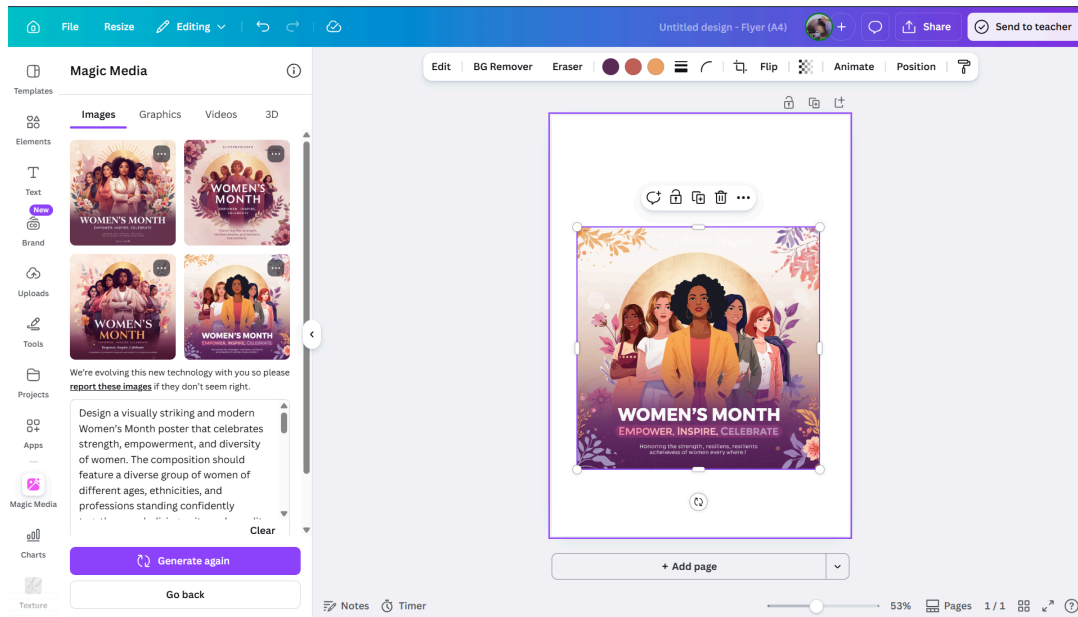

B. AI-Assisted Prompt

LLM Used: **ChatGPT**

Improved Prompt:

“A powerful Women's Month celebration poster, featuring diverse women standing confidently, soft empowering lighting, warm purple and gold color palette, modern editorial design style, cinematic composition, strong sense of empowerment and unity, clean typography space, high detail, professional campaign poster, inspirational and uplifting mood”

Output Documentation:

The improved prompt produces a more structured and impactful poster design. The image shows clearer visual focus, with stronger composition and a consistent theme of empowerment. The lighting and color palette (purple and gold) create a symbolic and emotional tone associated with Women's Month. The overall design feels more intentional, professional, and suitable for a campaign poster.

ANALYSIS AND REFLECTION

The outputs generated from the original and improved prompts using Canva Magic Media showed clear differences in quality, structure, and visual communication. The original prompt, "Women's Month poster," resulted in a generic and less refined image. While the output was related to the theme, it lacked a clear focal point, consistent style, and strong visual hierarchy. The design appeared random, with no clear direction in terms of composition, color scheme, or emotional tone. As a result, the poster did not effectively communicate the purpose of Women's Month, which is typically centered on empowerment, recognition, and celebration of women.

In contrast, the improved prompt produced a significantly more polished and intentional visual output. By adding specific instructions such as "diverse women standing confidently," "warm purple and gold color palette," and "modern editorial design style," the AI generated a more cohesive and professional-looking poster. The improved image demonstrated stronger composition, with a clear subject focus and balanced layout. The use of color and lighting also contributed to a more symbolic and emotionally engaging result, aligning better with the concept of empowerment and unity.

The improved prompt greatly enhanced clarity because it provided detailed instructions about what elements should be included in the image. Instead of leaving the AI to interpret a broad

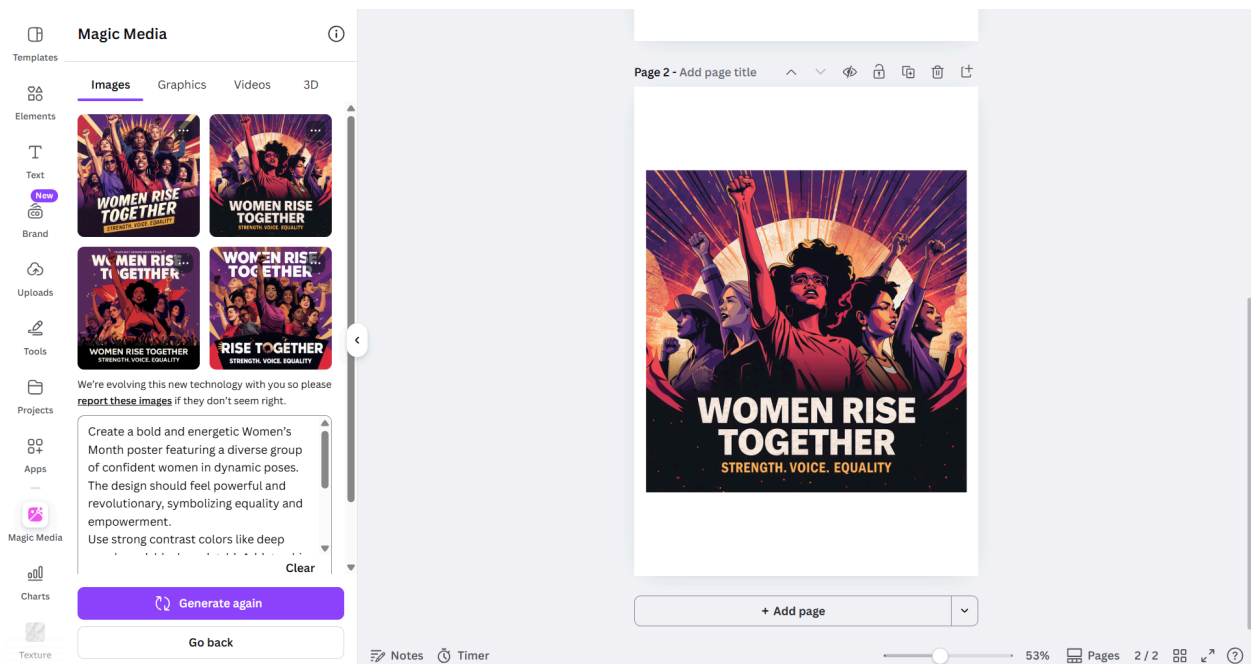

idea, the prompt defined the subject, mood, and design style. Depth was also improved, as the output included more visually meaningful elements such as cinematic lighting and structured composition, making the poster more realistic and expressive. Relevance increased because the prompt explicitly connected the design to empowerment and Women's Month themes, ensuring that the output matched the intended message.

The key changes that led to better results were the addition of descriptive visual elements, emotional tone, color palette specification, and composition guidance. These refinements helped the AI understand not only what to generate, but also how the final output should feel and look. This demonstrates that prompt engineering is not just about giving instructions, but about carefully structuring those instructions to guide the AI toward a more precise and purposeful result.

From this activity, I learned that effective prompt engineering significantly improves the quality of AI-generated outputs. A well-structured prompt leads to more accurate, meaningful, and visually appealing results. It also highlights the importance of being specific with details such as style, mood, and composition when working with AI tools, especially in design-related tasks.

APPENDIX

Other Prompt variations:

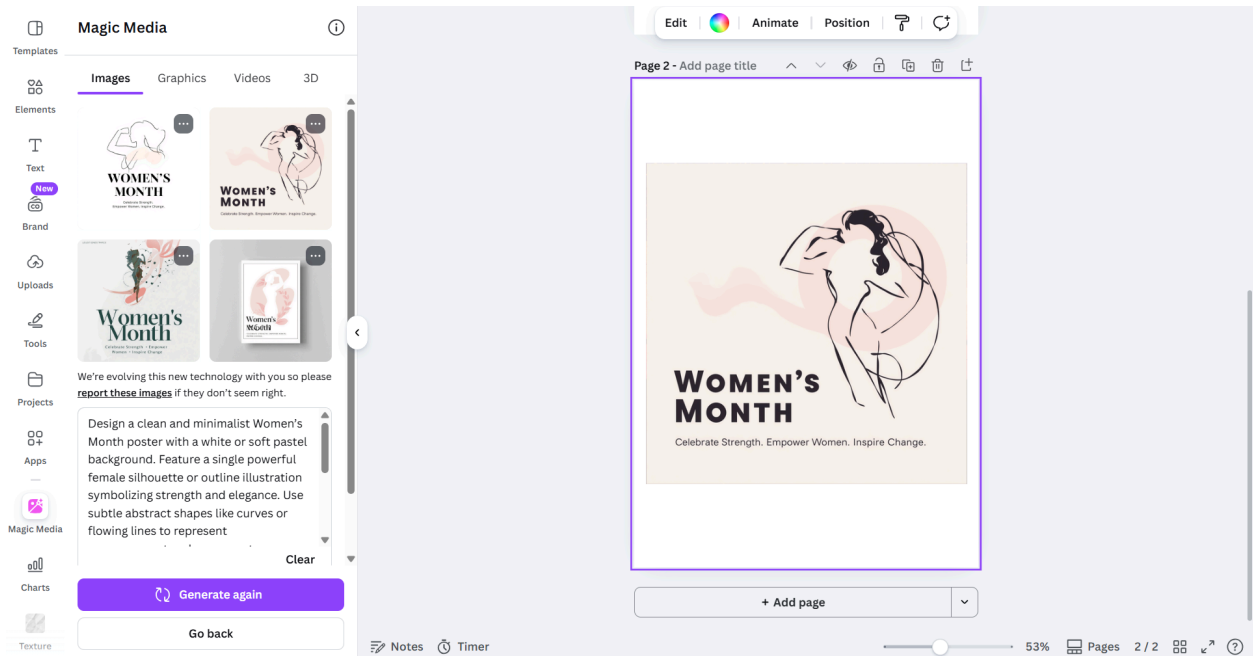

"Create a bold and energetic Women's Month poster featuring a diverse group of confident women in dynamic poses. The design should feel powerful and revolutionary, symbolizing equality and empowerment.

Use strong contrast colors like deep purple, red, black, and gold. Add graphic elements such as raised fists, geometric shapes, or light bursts.

Headline: "Women Rise Together"

Subtext: “Strength. Voice. Equality.”

Style should feel impactful like a campaign or protest-inspired visual.”

“Design a clean and minimalist Women’s Month poster with a white or soft pastel background. Feature a single powerful female silhouette or outline illustration symbolizing strength and elegance. Use subtle abstract shapes like curves or flowing lines to represent empowerment and movement.

Typography should be modern sans-serif and bold. Main text: “**Women’s Month**” with the subtitle “**Celebrate Strength. Empower Women. Inspire Change.**”

Focus on negative space, balance, and a professional editorial design style suitable for corporate or academic use.”
